

FRCS VMS POS System

Complete User Guide - Fresh Install Version

What's New in This Version

- Inventory Departments for proper item classification
- Excel Import for bulk product loading
- Live Debtor balance in POS + full details on receipts
- Advanced Manual Invoice Entry with stock & audit
- Per-item Stock Movement History (full traceability)

1. First Time Setup (Fresh Install - No Demo Data)

1. Run the application (python run.py)
2. You will be redirected to the Setup Wizard
3. Create your first Branch (Name + TIN + VMS UID are mandatory for FRCS)
4. Create your Administrator account
5. Log in and go to Settings to manually configure Tax Rates and Payment Methods

Note: There is deliberately no automatic sample data. Everything must be set up by you.

2. Inventory Departments (New Classification)

Go to 'Departments' in the main navigation.

Create departments such as Groceries, Electronics, Hardware, Beverages, etc.

When adding or editing products in Inventory, assign them to a Department using the dropdown. This provides much better structure than free-text categories.

3. Importing Products from Excel

In the Inventory page, click the 'Import Excel' button.

Recommended columns (case insensitive):

SKU, Name, Price, Cost, Department, Category, ReorderLevel, Unit, Barcode

The system will create new products or update existing ones (matched by SKU).
Departments are automatically matched or created.
Zero stock is initialized for all branches.

4. POS Terminal & Debtors (On-Account Sales)

When making a sale:

- Select a Debtor from the dropdown (live balance is fetched and displayed)
- Add items normally
- Choose ON_ACCOUNT or CREDIT as payment method

The official FRCS fiscal receipt will show full debtor details including name, TIN, phone, address, and outstanding balance after the sale.

5. Manual Invoice Entry

Use this screen for wholesale, B2B, or manual credit invoices.

Features: Dynamic line items, debtor selection with live balance, fiscalize toggle, and automatic stock deduction with full movement audit trail.

6. Stock Movement History (Full Traceability)

In the Inventory screen, click the 'History' button next to any product.

You will see a complete chronological list of every movement:

- POS Sales
- Manual Invoice Entry
- Goods Receipts
- Adjustments & Transfers
- Returns / Credit Notes

Each row shows previous quantity, new quantity, user, date, and reference link.

7. VMS Certificates & Fiscal Invoices

Every sale produces a fiscal invoice.

Go to 'VMS Certificates' to configure per branch:

- Simulate Smart Card (testing)
- Upload real .pfx / .p12 certificate from FRCS

Use the 'Test Signing' button to immediately verify that the certificate is working correctly.

This guide is also available anytime from the Dashboard or top navigation.
